Recommended for use in the semi-conscious or unconscious patient with an intact gag reflex. Not easily dislodged during transport and better tolerated than an Oropharyngeal Airway. Designed to be inserted into the nasal passageway to secure an open airway. When a patient becomes unconscious, the muscles in the jaw commonly relax and can allow the tongue to slide back and obstruct the airway.

- Sterile
- Flared end prevents the device from becoming lost inside the patient's nose
- Soft – no damage to nasal passage
- Flexible – resists collapse or kinking
- Not made with natural rubber latex

- Oral Airways are made of polypropylene (PP)
- Disposable airways provide superior performance
- Unobstructed passage – unique perforated midway openings assure ventilating channel and permit access of a suction catheter, even if airway shifts or is partially occluded
- Strength – reinforced bite block prevents collapse of airway
- Flexibility – smooth, non-brittle finish permits easy insertion without danger of breaking when distorted
- Less trauma – greater accessibility of suction catheter permits removal of secretions at a faster rate
